

Q23 What type of packets should be sent in PGP to provide confidentiality?

Packets that provide confidentiality are:-

1) Conventional - Key - Encrypted Data packets

It provides confidentiality by enciphering a block of data with a conventional encryption algorithm.

2) Public Key Encrypted Packets

It conveys the one-time session key used to encrypt the message.

3) Public Key Packet

Represents RSA Public Key

4) User ID Packet

Identifies a user if it is associated with a public or private key.
